WORKSPACES BY NETCORENETWORK

Welcome to Workspaces, a self-hosted workspace that brings team messaging, file sharing, and video calls together in one app. Collaborate directly with your team, store files on your own devices, and maintain control over your business data without sacrificing the tools you use every day.

Here's a quick guide to getting started!

1. Messaging

Stay connected with your team, whether you're chatting one-on-one or collaborating as a group.

- **Direct Messages:** Chat privately with anyone on your team. Perfect for quick questions, check-ins, or one-on-one discussions.
- **Rooms:** Create group conversations for projects, departments, topics, or anything else. Keep everyone in the loop and conversations organized.

NetcoreWorkspaces also makes it easy to keep conversations interactive and organized.

- **Reactions:** Hover over any message to react with an emoji. A quick way to acknowledge something without sending another message.
- **Threads:** Reply directly to a specific message to keep related discussions together. Threads open in a side panel, and you can choose whether your reply stays in the thread or also appears in the main conversation.
- **Edit Messages:** Made a typo? Hover over any message you've sent, click on the pencil, and make your changes.
- **File Sharing:** Upload files directly into any conversation. Whenever you share a file, you'll have the option to **Save to Files** right away, keeping everything organized and accessible throughout your workspace.

Your messages, conversations, and files are all connected, so you can move between them without missing a beat.

2. Calls

Sometimes it's easier to talk than type!

Start a voice or video call directly from any Room or Direct Message by clicking the **Call** button in the top-right corner of the conversation. Anyone in that conversation can join,

whether it's a quick one-on-one or a call with the whole team. If anyone else on your team starts the call, you'll get notified with a sound and a message with a button to join.

While you're on a call:

- **Mute or unmute** your microphone and **turn your camera on or off** whenever you'd like.
- **Share your screen** to present or collaborate in real time.
- **Minimize your call** to the bottom of your screen so you can keep chatting, browsing files, and working without disconnecting.
- **Leave the call** whenever you're done.

3. Files

Keep your team's files together in one easy-to-find place.

- Upload files to share with your team.
- Create folders to keep everything organized.
- Preview files directly in your workspace.
- Download files whenever you need them.

No more digging through emails or searching for links. Everything is right where your team needs it.

4. People

See who's part of your workspace!

The People section shows everyone on your team, along with who's currently online. It's an easy way to see who's around and get to know the people you're working with.

5. Your Profile

Make your workspace feel like yours!

Your profile is always available at the bottom of the sidebar. Click it anytime to update your name, profile picture, or other personal details.

This helps your teammates recognize you across the workspace.

You're all set! 🎉
